Finding of Suitability to Transfer
SUPERFOST No. 3 Transfer
Notification of Petroleum Product Storage, Release and Disposal
Fort McClellan, Calhoun County, Alabama
Page 1 of 1

Facility No.	Parcel No.	Name of Petroleum Product	Date of Storage, Release, or Disposal	Remedial Actions
1201 (Former)	44(4)	Heating oil	One 1,000-gallon underground storage tank operated since 1978 was removed in 1996.	<p>In 1996, the UST was removed. During tank removal tank appeared to be in good condition. A mild hydrocarbon odor was detected. Soil exhibiting evidence of contamination (approximately 26.4 cubic yards) was excavated and stockpiled. The stockpiled soil was sampled and analyzed for total petroleum hydrocarbon (TPH). Results indicated TPH levels of 250 parts per million (ppm). The stockpiled soil was treated by means of thermal volatilization.</p> <p>In 1999, a UST closure assessment was conducted. Three subsurface soil and three groundwater samples were collected and analyzed for benzene, toluene, ethylene and xylenes (BTEX) and TPH. UST closure assessment results indicated that there are no chemicals associated with the site that present an unacceptable risk to either human health or the environment. "No Further Action" is required for the site.</p>
3179	505(3)	Gasoline	One 1,400-gallon underground storage tank, installation date is unknown, was removed in 1991.	<p>Approximately 750 gallons of gasoline and water were removed from the tank prior to removal. In 1999, a UST closure assessment was conducted. Three subsurface soil and two groundwater samples were collected and analyzed for BTEX and TPH. UST closure assessment results indicated that there are no chemicals associated with the site that present an unacceptable risk to either human health or the environment. "No Further Action" is required for the site.</p>
